

# ReBuild Better™

The world's first carbon intelligence platform for insurance claims

Transform your claims process with fast, powerful carbon reporting right from your repair estimates

## What is ReBuild Better?

ReBuild Better allows repair estimates from any source — including standardized platforms such as Xactimate, Verisk, and Cotality, as well as non-standard or custom formats — to be uploaded seamlessly to produce fast, accurate carbon reports. These reports specify lower-carbon and more resilient material alternatives, along with the cost difference at the claim level. This enables verifiable tracking of both actual emissions and emissions reductions achieved through material choices.

## Global Warming Potential (GWP) Report

# Why ReBuild Better?

## ✓ Verifiable emissions tracking

Track actual emissions and reductions based on what gets installed

## ✓ Configurable recommendations

Set criteria for 'green coverage', lower carbon alternatives, or regional preferences

## ✓ Emissions insight

Capture data on avoided emissions to demonstrate the value of sustainable claim decisions

## ✓ Supply chain optimization

Combines with waste diversion for complete carbon footprint accuracy

## ✓ Cost transparency

See financial impact alongside environmental benefits

## ✓ Coming Soon

Resilience-based lifecycle calculations

## Enterprise view of all GWP Reports

Access EcoClaim TRAX for advanced aggregate reporting on all GWP reports generated to gain insight into the enterprise level impact the decisions being made at the claim level are having.

## Power your supply chain decisions

ReBuild Better gives insurers the power to actively influence dollars spent in their supply chains for both more resilient and lower carbon outcomes right at the point of claim.

## How It Works

#	Step	Details
1	Upload Estimate	Submit repair estimates in any format — Xactimate, Verisk, Cotality, PDF, or custom spreadsheets
2	Automated Analysis	EcoClaim processes line items, identifies materials, and calculates embodied carbon (GWP)
3	Alternative Matching	Lower-carbon and more resilient substitute materials are identified with cost differentials
4	Report Delivery	Receive a detailed ReBuild Better report within 24–48 hours (attritional) or 3–5 days (complex)
5	Track & Report	Aggregate data in EcoClaim TRAX to monitor portfolio-wide emissions and reductions

## Ready to transform your claims process?

Schedule a demonstration to see ReBuild Better in action and discover how your organization can reduce emissions while improving claim outcomes.
